Inventoried quantity of single space parking meters on downtown streets as of 10-04-11 is 638. Of that amount, only 500+/- are operable. Those that are NOT operable are the older mechanical-type parking meters. Operable meters are new generation elctronic meters.

The estimated number of locations where there is NO meter and only an empty post is 600+/-. The reason meters are missing and posts vacant are past vandalism and theft or, the single space parking meter was removed and relocated to a location where a meter was missing and parking demand was much greater than where it was located.
